

Showcase of Depth and Perspective in Web Design

January 28th, 2011 Posted in Inspiration, Web Design, depth, perspective | Write comment

An interesting way to spice up a web design is to add some depth to it. Instead of making a design flat, certain elements and techniques can stimulate the depth perception of the visitor. Special cues tell us that certain objects are closer than others and we can put up a three-dimensional picture of our environment.

In the following we want to show you some great examples of depth in web design.

Wing Cheng

ABOUT AMR HUSSEIN

CSS aficionado focused on developing Web sites that use the most modern techniques for achieving accessibility, branding, and sophisticated usable design. Interested in adapting content management systems using CSS. Interested in accessibility of Web applications, Ajax, and server side processing of CSS files. Skilled at varying technical levels about standards-based, cross-browser compatible designs.
